

Q: Determine the AP whose third term is 16 and the 7th term exceeds the 5th term by 12.

Solution:

Parameter	Value	Description
$x(6) - x(4)$	12	7th term exceeds 5th by 12
$x(2)$	16	Third term
d	?	Common difference
$x(0)$?	First term of AP
$x(n)$	$(x(0) + nd)u(n)$	General term

TABLE I

INPUT PARAMETERS TABLE

From Table I

$$x(0) + 6d - x(0) - 4d = 12 \quad (1)$$

$$\implies 2d = 12 \quad (2)$$

$$\implies d = 6 \quad (3)$$

Also,

$$x(0) + 2d = 16 \quad (4)$$

$$\implies x(0) + 2(6) = 16 \quad (5)$$

$$\implies x(0) = 4 \quad (6)$$

$$\therefore x(n) = 6n + 4 \quad (7)$$

From Table I

$$X(z) = x(0) \frac{1}{1 - z^{-1}} + d \frac{z^{-1}}{(1 - z^{-1})^2} \quad (8)$$

$$= 4 \frac{1}{1 - z^{-1}} + 6 \frac{z^{-1}}{(1 - z^{-1})^2} \quad (9)$$

$$= \frac{4 + 2z^{-1}}{(1 - z^{-1})^2} \quad |z| > 1 \quad (10)$$
